

The term runlevels is used in the **sysV init** systems. These have been replaced by systemd targets in **systemd** based systems.

The complete list of runlevels and the corresponding systemd targets can be seen below:

**runlevel 0 -> poweroff.target**

**runlevel 1 -> rescue.target**

**runlevel 2 -> multi-user.target**

**runlevel 3 -> multi-user.target**

**runlevel 4 -> multi-user.target**

**runlevel 5 -> graphical.target**

**runlevel 6 -> reboot.target**
